

REMOTE VIEWINGSM COMBINES THE BEST OF BOTH WORLDS

**QUALIFIED
PERSONNEL**

Tom M. Conley

Tom M. Conley is the President & C.E.O. of The Conley Group, Inc. In addition to Remote Viewing, his company provides highly qualified on-site security services, security patrol services, and a full range of investigative services. Mr. Conley has earned three college degrees as well as 10 professional certifications. He is an author, a frequent contributor to media outlets and professional publications, and a former police captain. He is a decorated senior commissioned officer in the United States Navy, where he served in law enforcement, counter-terrorism, and information security leadership positions. During his 35 year career, he has provided service to the U.S. Marshals Service, Amoco Oil Company, General Electric Corporation, the State of Iowa, NBC Television, The Des Moines International Airport, and many more.

STATE OF THE ART ELECTRONICS

REMOTE VIEWING IS A 24/7 COMPLETE SECURITY SOLUTION!

REMOTESM VIEWING

AN INTERACTIVE & INTELLIGENT SECURITY SOLUTION

WHAT IS REMOTE VIEWING?

Remote Viewing is the ability of a technical specialist in our **Remote Viewing Operation CenterSM (RVOC)** to acquire and maintain total domain awareness about and influence, what is occurring at another location. Rather than simply being an observer Remote Viewing is an all-inclusive system wherein the senses of a technical specialist in our RVOC are replicated via the use of electronics at other locations. Technical specialists interact virtually with both critical and routine systems at off-site locations. Remote Viewing works far better than having on-site guards and the savings are substantial. Remote Viewing is like having a security officer everywhere at once and saving a significant amount of your budget at the same time.

REMOTE VIEWING SOLVES TRADITIONAL SECURITY CHALLENGES

Individuals who are accountable for the safety and security of an organization's people, property, and information have traditionally faced many challenges in their efforts to achieve an adequate level of security. Organizational executives and managers are not only faced with the challenge of how to adequately secure their enterprise, but also how to accomplish this task in the face of very limited budgets. Add to this the fact that organizational executives and managers try to achieve an adequate level of security in the absence of a professional threat and risk analysis, and it is no wonder that the result is too often frustration, disappointment, and a high level of legal liability.

Remote Viewing was developed to provide end users of security services with a cost effective solution to these problems. No longer do organizational executives and managers have to settle for ineffective and inefficient traditional guards and electronic security measures that may work fine, but do not provide a true return on investment to the enterprise. Remote Viewing protects an organization's people, property, and information and does so in a way that increases the level of protection, decreases risk and legal exposure, all while simultaneously saving the organization money.

WHAT MAKES REMOTE VIEWING UNIQUE?

What makes the Conley Group's Remote Viewing solution distinct is not only that it ensures that customers have the correct type and combination of electronic systems and response, but also the fact that the Remote Viewing solution is tailored for each individual customer based upon that customer's threat analysis and risk profile. This powerful customized system configuration enables Remote Viewing customers to maximize their security effectiveness and do so without investing a penny more than they need to in order to achieve an adequate level of professional security. With Remote Viewing, customers attain equilibrium between risk management and security program expenditures, thereby achieving a maximum return on investment.
